

# Manager development

## 3 day intensive

### Who is this workshop for and why should you attend?

The Manager Development workshop is ideal for new supervisors, team leaders and managers or those with limited management experience. It is also suitable for those managers who need a refresher of the latest key management skills to make their workplace more effective.

In the first two days we will construct the model of a successful manager. Using the latest management theory and practice, participants will gain new knowledge, understand the behaviours and practice the skills that will prepare them for the challenges ahead. We will look at our own styles of leading and learning and then examine styles of management and ways of leading teams. After investigating the motivators and the factors that hinder our progress, we'll develop a number of strategies to overcome any obstacle. The course will cover conceptual strategic thinking all the way to efficient and effective operational tactics that can be applied to make any workplace more effective and organised.

On our final day we will 'sow the seeds of leadership' by exploring the competencies needed by tomorrow's managers and exploring paths to help you succeed with the challenges ahead.

Participants will return to the workplace with newly acquired knowledge and skills to demonstrate they are effective, motivational and organised managers.
